Importing Live Poultry into the United States

Last Modified:

European Poultry Trade Region

Austria, Belgium, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Great Britain (England, Scotland, and Wales), Greece, Hungary, Ireland (Republic of), Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Northern Ireland, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden

European Free Trade Association

Iceland, Liechtenstein, Norway, and Switzerland

USDA defines poultry as chickens, doves, ducks, geese, grouse, guinea fowl, partridges, pea fowl, pheasants, quail, swans, and turkeys. This page explains how to import all live poultry, except pigeons and doves (Columbiformes). For day-old poultry (DOP), please see <u>Import Poultry Hatching Eggs and Day-Old Poultry into the</u> <u>United States</u>.

With few exceptions, live poultry may **not** be imported from or transit through <u>countries or zones affected with highly pathogenic avian influenza (HPAI)</u>.

USDA requires the following for all live poultry imports:

- USDA import permit
- Veterinary export health certificate
- Port inspection
- Import quarantine

USDA requirements for **transiting** live poultry through the United States are detailed in the **USDA Transit Process** below.

For information on importing pigeons and doves (Columbiformes), see <u>Importing</u> <u>Columbiformes into the United States</u>.

How To Import Live Poultry

Expand All

USDA Import Permit

Please use the <u>Veterinary Services Permitting Assistant (VSPA)</u> to confirm your live animal import permit requirements. Select the "Live Animals" tab. The VSPA will provide you with a summary of required import documents, including permit applications, certificates, informational letters, and more.

- Live poultry shipments must be accompanied by a USDA import permit unless the shipment is from Canada and presents at a U.S. land border port of entry.
- Importers should apply for an import permit online using <u>APHIS eFile</u>. This will help expedite the entire permitting process and enable users to track the status of their permits, confirm receipt, and easily renew or amend existing permits. For more information on import permit application, visit <u>Animal Health Permits</u>.
- Alternatively, importers may submit a paper application using <u>VS Form 17-129</u> <u>Application for Import or In Transit Permit</u> (73.07 KB).
- Importers must submit the import permit application at least **7 business days** prior to shipping birds.
- The original import permit is valid for **30 days** and must accompany all live poultry shipments.

Veterinary Export Health Certificate

- Live poultry imported from any region of the world must be accompanied by a health certificate in English or with English translation that is:
 - Issued by a salaried veterinarian of the national government of the exporting region, or
 - Issued by a certifying official and
 - Endorsed by the competent authority of that country.

- Any allowable or required deviations of endorsement will be specified on the import permit.
- Certain exporting countries have a specific health certificate for live poultry. Other countries may use the U.S. model health certificate for live poultry or their own document that contains the same requirements as the model.
 - Canada: <u>Avian-Live Poultry- Canada-Health Certificate</u> (413.57 KB) (June 2022)
 - European Poultry Trade Region (EPTR):
 - <u>Avian-Live Poultry- EPTR-Model Health Certificate</u> (273.63 KB) (January 2025)
 - Other countries:
 - <u>Avian-Live Poultry-Not EPTR-Model Health Certificate</u> (314.82 KB) (January 2025)

Port Inspection

- A USDA port veterinarian must inspect live poultry at the first U.S. port of entry, unless otherwise indicated on the import permit.
- The importer must arrange for this inspection at least 72 hours in advance by contacting the USDA port veterinarian, whose contact information is listed on the import permit.
- Inspection consists of a visual inspection of the shipment, export health certificate, and U.S. import permit. You can find user fee rates for inspection services at <u>VS Import/Export User Fees</u>.

Import Quarantine

 Live poultry (not including <u>hatching eggs</u>) must undergo a minimum of 30 days quarantine at a USDA Animal Import Center listed below or a USDA-approved private quarantine facility. For guidance on establishing a private quarantine, visit <u>VS Guidance and Other Documents for Avian Importation</u>. Initial USDA approval of a private quarantine facility may take several months; USDA routinely confirms approval before issuing the import permit.

- Live poultry imported from areas of Canada that are not restricted due to highly pathogenic avian influenza (HPAI) or Newcastle disease, and that have not transited such areas, **do not** require quarantine.
- Importers seeking to quarantine at a USDA Animal Import Center should make reservations directly with the center of choice before the shipment arrives.
 USDA must confirm the reservation before issuing the import permit.
- Fees include, but are not limited to, port inspection, laboratory testing that occurs during quarantine, and the quarantine stay. You can find user fee rates at <u>VS Import/Export User Fees</u>. The USDA Animal Import Center will provide an estimate of the overall cost of quarantine.
- Birds are tested in quarantine to determine if they are free of certain communicable diseases. The cost of diagnostic testing is separate from the quarantine fee.

USDA Transit Process

- Live poultry shipments transiting the United States from the exporting country to a third country destination must be accompanied by a USDA transit permit and a contingency plan as described in <u>VSG 13404.2 Transit Shipments of Live</u> <u>Animal Commodities</u> (479.88 KB).
- The process for applying for the transit permit is the same as for the import permit (see "<u>USDA Import Permit</u>" section above). Denoting the route of travel on the application distinguishes the type of permit requested.
- USDA oversees transit shipments while in the United States. The importer must arrange for USDA services at least **72 hours in advance** by contacting the USDA port veterinarian listed on the transit permit.
- The importer must submit the contingency plan with the permit application and the request for service at the U.S. transit port.
- The transit permit lists any special instructions for the importer and port staff. For more information, see <u>VSG 13404.2 Transit Shipments of Live Animal</u> <u>Commodities</u> (479.88 KB) and <u>Notice Regarding APHIS Live Animal Import and</u> <u>Third-Country Import Transit Permits</u> (272.29 KB).
