APHIS NBAF Scientist Training Program

Last Modified:

First student cohort at the program's kick-off event at Plum Island Animal Disease Center, Fall 2018

APHIS established this graduate training program to develop the next generation of scientists to support the Foreign Animal Disease Diagnostic Laboratory's (FADDL) current and expanded mission objectives at the National Bio and Agro-Defense

Facility (NBAF).

[Expand All](#)

Background

The Animal and Plant Health Inspection Service (APHIS) was established by the Secretary of Agriculture on April 2, 1972. The agency's mission is to protect the health and value of American agriculture and natural resources. APHIS promotes the health of animal and plant resources to facilitate their movement in the global marketplace and to ensure abundant agricultural products and services for U.S. customers. This mission includes guarding against the introduction or re-emergence of animal and plant pests and diseases that could limit agricultural production and damage export markets. APHIS also monitor for and respond to potential acts of agricultural bioterrorism, invasive species, and diseases of wildlife and livestock, focusing on diagnostic methods and outbreak response preparedness and management.

FADDL is a national reference laboratory for APHIS [Veterinary Services](#) and the [National Animal Health Laboratory Network](#) and an international reference laboratory for the Food and Agriculture Organization of the United Nations and the World Organisation for Animal Health. FADDL is currently located at the [Plum Island Animal Disease Center](#) (PIADC) in New York, the [National Bio and Agro-Defense Facility](#) (NBAF) in Kansas, and with the [Puerto Rico Department of Agriculture](#) in Puerto Rico. PIADC is the only U.S. location approved for handling high-consequence foreign animal diseases (FADs), including foot-and-mouth disease and rinderpest viruses. The majority of the U.S. FAD diagnostic expertise for livestock diseases resides at [PIADC-FADDL](#), within a small team of technicians, microbiologists, veterinarians, and veterinary scientists (D.V.M./Ph.D.).

FADDL's work at Plum Island is moving to NBAF in Kansas. It is likely that many of FADDL's subject matter experts (SMEs) will not relocate to NBAF. Loss of institutional expertise combined with the increased number of staff needed at NBAF creates a need for a plan to bridge the transition gap. Furthermore, the FADDL mission will expand at NBAF to include zoonotic and emerging diseases, with a new emphasis on biosafety level (BSL)-4 pathogens. SMEs knowledgeable in these agents and with

expertise in working in BSL-4 laboratories will be critical to develop BSL-4 programs at NBAF.

APHIS developed the NBAF Scientist Training Program (NSTP) to minimize the anticipated SME gap during the transition process and identify highly qualified candidates to fill key roles in NBAF. Applicants for the NSTP must be enrolled in a graduate level (M.S., Ph.D., or D.V.M./Ph.D.) program (preferably second year or later), at a university and in a laboratory-based field of study. These may include microbiology, virology, molecular biology, diagnostics, and bioinformatics. APHIS will partner with universities and laboratories to ensure the fellows' research projects address specific FADs and capability needs. Once accepted into the NSTP, the fellows will receive funding to cover tuition and fees, stipend, health benefits, materials and supplies, travel, and publication costs, for a period not to exceed 5 years. Upon successful completion of the programs, each fellow will be offered a full-time Federal position and required to fulfill a service commitment at NBAF, PIADC-FADDL, or both, depending on agency needs and timing of degree completion.

Program Outline

Degree-Granting Programs Covered

M.S., Ph.D., and D.V.M./Ph.D.

Support Provided for Each Fellow

Tuition and fees, stipend, health benefits, materials and supplies, travel, and publication costs

Maximum Period of Support

3 years (M.S.), 4 years (Ph.D.), or 5 years (D.V.M./Ph.D.)

Expectations

In addition to specific degree requirements, fellows will maintain a minimum 3.25 GPA and support NBAF standard operating procedure development and transition-related activities where appropriate.

Eligibility

Applicants for the NSTP must be enrolled in a graduate level (M.S., Ph.D., or D.V.M./Ph.D.) program (preferably second year or later) at a university and in a laboratory-based field of study. These may include microbiology, virology, molecular biology, diagnostics, and bioinformatics.

Past NSTP fellows were enrolled at degree programs at selected universities, including Kansas State University, Iowa State University, Mississippi State University, Auburn University, North Carolina State University, University of Wisconsin, Tufts University, Texas A&M University, Pennsylvania State University, University of Missouri, University of Texas Medical Branch, Louisiana State University, Colorado State University, and the University of Georgia. Students at other academic institutions that offer education and experience in agriculture and microbiology related sciences are encouraged to apply.

Application Process

Applications are submitted through the office of the dean or department head of the university. The universities are asked to submit a packet of applications including all of the students applying from that university. A separate NSTP application packet—including the application form, current resume/CV, letter of intent, and three letters of reference—is required for each applicant.

Federal Position

Upon successful completion of the program, each fellow is offered a full-time Federal position and will fulfill a service commitment dependent on agency needs and timing of degree completion.

Service Commitment

Based on the number of years of funding received, fellows must fulfill a tiered service commitment after completing the program at PIADC or NBAF. Required years of service in the target position are as follows:

- 4 years of service for 2 years of funding
- 5 years of service for 3 years of funding
- 6 years of service for 4 years of funding
- 7 years of service for 5 years of funding

Failure to complete the service commitment to APHIS will require funding repayment.

Application Procedure

The NSTP accepts applications annually. For the fall semester enrollment, applications are due **June 1**. Application cycles are announced via email to university graduate program offices, as well as on this page.

For interested students: The application process is coordinated through a university point of contact. The university will provide application packets and additional information regarding timelines, point of contact, and process for submission through your university. If you do not know the point of contact for your university, have your graduate principal investigator or dean contact the NSTP office for information. **Note:** *NSTP will not accept applications directly from applicants.*

For universities: Contact NSTP directly to obtain application packets and detailed instructions on the submission process.

Complete application packets include the NSTP application form, current resume/CV, letter of interest, and three letters of recommendation. Application packets are to be submitted through the university point of contact along with the evaluation rubric.

Questions?

Please feel free to reach out with any questions or concerns regarding the application process by sending an email to nstp@usda.gov.

- Alexa Bracht, NSTP Coordinator
- Dr. Robin Holland, FADDL Director
